### 2020-2021 FLU VACCINE INFORMATION

The (CDC) Centers for Disease Control and Prevention is recommending that flu vaccines be obtained in September or October of this year due to the COVID 19 pandemic. The CDC has concerns of the possibility that people may get infected with the flu and COVID 19 at the same time. According to experts, the flu season this year may start in early October and could last until late May. Obtaining the flu vaccine is the single best way to prevent the flu and any related complications.

Please make a plan to ensure that everyone who can receive the flu vaccine obtains one and gets it early. Reach out to your healthcare professionals to schedule appointments.
